

Q2 [Concept of \rightarrow Androhand \rightarrow Works over 2 Coordinates]

Qx we will, a A \rightarrow makes 100 randomises of diff. x or y coordinates

b B

c C

d D

\rightarrow This will make a font for a particular user.
Then you can type the text of your own handwriting

[The Concept of this program is Simple]

Makes 52 ~~char~~ graphical representation^{Input} of characters of both upper case & lower case letters

[Then it will convert it into ASCII codes]

[And makes 100 randomises of each character i.e. it will make total 52000 chars]

take example of [a a a a a a a] \rightarrow makes a total 100 slightly different coordinates of a and it will randomly use 1 of 100 a in text

MOTTO -

[make your own handwriting font]
